linkedin.com/in/mohammad-uzair-saleem · portfolio

Full-stack developer building cross-platform apps with Flutter and React, and the sync, storage and billing logic behind them — including an offline-first sync engine with idempotent writes and invoicing apps used by real businesses. Also a Hafiz with an Ijazah and years of teaching Quran and Arabic in person and online, so I know Islamic-education platforms from the student and teacher side too. I design my own app icons and UI (Inkscape).

TECH STACK

Languages	Dart, JavaScript, Python, HTML, CSS
Frameworks	Flutter (Riverpod, ObjectBox), React, Node.js, Capacitor
Web & Data	IndexedDB, service workers (Workbox), offline-first sync, REST APIs
Design & Tools	Inkscape, Olive Video Editor, Git, UI & graphics design
Spoken	English, Arabic, Urdu

EXPERIENCE

Fire Defence — Freelance Full-Stack Developer **2026**

- Built an offline-first sync engine for a React/Node inspection app — local-first writes to IndexedDB, a durable retry queue, and idempotent server writes that prevent duplicate records over unreliable connections.
- Packaged the web app as a native Android app with Capacitor (resolving a full Gradle/AGP/Kotlin toolchain conflict) and added a Workbox service worker so the same offline experience runs in-browser on any device.
- Diagnosed and fixed concurrency bugs through hands-on device testing — stale cache-key collisions, missing data filters, and connectivity-detection failures invisible in normal development.

Markaz Umaza — Co-CEO **2024 — Present**

- Founded and run an Islamic education business; lead its product development end to end.
- Built and shipped the business's invoicing app (Flutter) for student billing and client payments.
- Building a homework tracker and lesson tracker for students and teachers.

Quran Quorum — Media & Content Manager · Developer **2025 — Present**

- Produce and structure online course content for the platform.
- Leading a redesign of quranquorum.com for clearer navigation and usability.
- Built the Nigerian Mushaf app for the platform (see Projects).

PROJECTS

Nigerian Mushaf · Flutter · Riverpod — QURAN QUORUM

Quran reader for the West African Maghribī Mushaf — 604 high-res pages with two-layer (ink + decoration) GPU compositing, independent page/app theming, and multi-mode search.

Qiraah Arabiyyah · Flutter — PLAY RELEASE PENDING

Arabic reader app built independently with Flutter — completed Google Play closed testing; production access under review for public release.

Mushaf Mistake Marker · Flutter · Riverpod · ObjectBox — IN PROGRESS

Cross-platform app for tracking Hifz and Tajwid mistakes — colour-coded word marking, per-page/surah/juz progress stats, and multi-user tracking, built local-first.

Invoice Generator · Flutter — CLIENT · NASIR AUTOS

Freelance build for **Nasir Autos** to create and issue customer invoices; also runs Markaz Umaza's student billing.
